# 20 FINAL YEAR PROJECT

## IDEAS FOR PYTHON

### 1. Resume Screening and Ranking with AI/ML

Scans resumes, matches them with job descriptions, and ranks candidates based on skill fit using AI algorithms.

### 2. Lips Movement Detection for Deaf using AI/ML

Detects and interprets lip movements to convert them into text or voice for hearing-impaired communication.

### 3. Craft E-commerce Website

An online platform for selling handmade crafts with features like product listing, cart, and secure checkout.

### 4. Helmet Number Plate Detection using AI/ML

Detects riders without helmets and captures their number plates using image processing and AI models.

### 5. NLP Chatbot for College Queries Solving

An AI chatbot that answers common college-related questions, integrated into the official college website or app.

### 6. Network Monitoring and Management System using AI/ML

Tracks network performance, detects faults, and optimizes bandwidth usage using AI analytics.

### 7. Voting Blockchain Web App using AI/ML

Secure online voting platform using blockchain for transparency and AI for voter identity verification.

### 8. Video/Audio Based Depression Detection using AI/ML

Detects signs of depression from a user's voice tone, speech patterns, or facial expressions in videos.

### 9. Pothole & Light Complaint Website

A civic portal for reporting potholes or faulty streetlights with location tagging and complaint tracking.

### 10. Fitness AI/ML Chatbot

An AI chatbot that creates workout plans, tracks fitness progress, and gives diet suggestions based on user goals.

# 20 FINAL YEAR PROJECT

## IDEAS FOR PYTHON

### 11. Vehicle Mileage Prediction using ML

Predicts a vehicle's mileage based on input parameters like engine size, weight, and fuel type using machine learning models.

### 12. NLP ChatBot – College

An AI-powered chatbot that answers college-related queries such as admissions, events, and course details using Natural Language Processing.

### 13. Price Tracking Website using ML

Monitors product prices across e-commerce sites and predicts future price trends for smart buying decisions.

### 14. Placement Prediction using AI/ML

Predicts a student's chance of getting placed based on academic performance, skills, and extracurricular activities.

### 15. National Sports Website

A web platform that provides live updates, schedules, and news about national-level sports events and tournaments.

### 16. Integrated AI-driven Bot for Student Mental and Future Counselling

AI bot that assesses student mental health and career preferences to offer guidance and personalized suggestions.

### 17. Heart Disease Detection using AI/ML

Analyzes patient data like blood pressure, cholesterol, and ECG results to predict heart disease risk.

### 18. Question Paper Generator using AI/ML

Generates question papers automatically based on syllabus, difficulty levels, and topic weightage.

### 19. Mood-Based Music Recommendation

Recommends songs based on the user's current mood detected through facial expression or text sentiment analysis.

### 20. Video Info Decryption/Caption using AI/ML

Extracts and decrypts embedded information from videos or generates captions automatically using AI.
